1 A self-calibrating sound tube is fitted inside your storage tank. Using new technology it senses the level of liquid and its small transmitter sends this information out by regular radio signals up to 1,000 metres, right into your premises.

2 Once your Watchman Niveau is plugged into an electrical socket you can read the volume of liquid remaining in your tank from its clear display. No need to go out into the cold to check your level.

3 Your Watchman Niveau measures the volume of liquid in your tank in tenths. When the level is low its red light pulses to attract your attention.

Environmental protection Your Tank Signal System will allow deliveries to be made using the FullStop overfill alarm. This improves environmental protection by helping to prevent overfills.

Sensor Systems are proud to support these trade organisations and to have received these awards and approvals:
